

Bicycle Tire and Tube Bundling Instructions

1. Collect unwanted/used bicycle tires and tubes until a sufficient number of tires and tubes are collected (minimum 25 for regular bicycle tires , 10 for mountain bike tires and 25 for tubes).
2. Bundle the tires and tubes. **NOTE: tires and tubes must be bundled SEPARATELY.** This is very important, as the recycling processes are different for tires versus tubes.
3. Bundling instructions for **REGULAR BICYCLE TIRES :**
 - Group/stack the required # of tires (25 tires per bundle).
 - This is for regular bicycle tires i.e. see section below for mountain bike tires.
 - Do not cut tires.
 - Bind (tie) the group of tires together using a bicycle tube. **The valve stem can be left on or cut off.**
 - Bind the group of tires together by using the tube like a piece of string (i.e. Tie them together with a simple knot).
 - See attached illustration below.

4. Bundling Instructions for **MOUNTAIN BIKE TIRES:**

- Same as for regular bicycle tires but please limit the bundle to 10 mountain bike tires.

5. Bundling Instructions for **TUBES**

- Group/stack the required # of tubes (25 tubes per bundle).
- Any type of bike tube is acceptable.
- Do not cut the tubes. Valve stems can be left on.
- Bind (tie) the group of tubes together using a bicycle tube. **The valve stem can be left on or cut off.**

Bicycle Tire and Tube Bundling Instructions

- Note, as part of the recycling process of tubes, the valve stems will eventually be cut off and recycled as well.
- See illustration below.

6. Place bundled bicycle tires and tubes next to scrap tires for pickup by TSBC hauler as part of their regular collection. 1 bundle is considered a PTE (Passenger Tire Equivalent)
7. **Please note the hauler may, at their sole discretion, refuse to pickup improperly bundled bicycle tires and tubes.**

Thank You!
